The sports medicine and science journal *Excel* has undergone exciting changes since Blackwell Scientific Publications took over publication from Volume 8, Number 1, 1992. *Excel* has effectively been relaunched for the international market. The Editorial Board now includes both local and international professionals in sports science and medicine. The journal has also moved from being an outlet for Australian Institute of Sport research to become a vehicle for the publication of research from all medical and allied practitioners both within Australia and internationally.

Articles of an applied nature on elite athlete performance will remain the theme of *Excel*, which will continue to publish original research covering the disciplines of biomechanics, medicine, massage, nutrition, physiology, physiotherapy and psychology. Case studies, conferences, book reviews and technical reports prepared under the direction of the National Sports Research Centre will also be published regularly in the journal.

Medicine and science in sport have become important areas of research at all levels of athlete performance. *Excel* is a valuable asset which will keep you up to date with current research and opinions.

In 1993 *Excel* will be published in March, June, September and December.
