LETTERS TO THE EDITOR

Club doctors and physiotherapists

EDITOR,—Waddington et al are to be congratulated on highlighting the need to provide the best available care to professional footballers. Their paper is, however, inherently biased because of the conclusions that detract from the soundness of their arguments. For example, they have provided no evidence for their postulation that non-chartered physiotherapists are more vulnerable to threats to their clinical autonomy than their colleagues. Furthermore, in many aspects wholly desirable. Published quotations from the semi-structured interviews are of an emotive nature, and the quoted positions cited by the interviewee are clearly leading. It is well recognized that responses in such interviews can be greatly influenced by the manner in which they are posed.

The authors make no comparison of methods used by chartered and non-chartered physiotherapists, and their outcomes. Similarly there has been no comparison between the performance of club doctors with or without postgraduate qualifications in sports medicine, and, moreover, no evidence produced of actual harm resulting. Indeed, in recent months in Scottish League football, the Dundee club doctor restored circulation to the foot of a player following a serious ankle injury, and the Dumbarton club doctor restored the breathing of an apnoeic player.

In a recent survey of 15 players in a Scottish football club (unpublished work), 13 stated that they had been discouraged by the (non-chartered) physiotherapists and patients and that they were not able to do their work properly. The (non-specialist) club doctor from training or competing while injured, and none had been encouraged by either to return to playing before complete recovery. Indeed, 10 confided to concealment of the true severity of injuries, perhaps reflecting the ethos at that particular club.

Care offered to professional footballers merits careful evaluation. However, this should be detailed, methodical, and independent of bias, such as that which can arise when studies are commissioned and funded by interested parties.

Club doctors and physiotherapists

EDITOR,—The article by Dr Waddington and others1 on the problems surrounding the appointment and qualifications of these personnel will come as no surprise to all who work with team sports in this country. It is a familiar story and the points raised are valid and in many aspects wholly desirable.

However, before it becomes established dogma that all club doctors must possess a postgraduate sports medicine qualification, may I raise a word in the defence of the generic GP. In doing so I confess freely to being a member of the one sport, one club breed described in the article, albeit in a different sport from Association Football.

What I believe a club and its players need from their medical advisor is immediate access to a medical opinion. The subject of the opinion is of course often sports injuries or sports related illness, but far from exclusively so. In my case I have taken the time and working in the immediate vicinity of the club is ideally placed for this task, which can at times be very demanding, at least in the urgency of the request. Club managers always need to know yesterday about their players. Enthusiasm for the club can mitigate against the stresses of this demand which can often intrude into family life as well as work. Of course in providing that opinion, doctors must know their limitations, practising only within their competence and referring on appropriately for specialist opinion when required. But is this not part of a GP’s standard job description? I suspect that all club doctors have in their knowledge of appropriately specialist colleagues, including sports physicians, who are rapidly able to provide that second opinion when required. It is this ability to use one channel for all its medical needs that is so valued by a club and its players.

I believe that the limited horizons of one club and its players would soon bore many doctors who have taken the time and commitment necessary to complete a postgraduate sports medicine qualification. Equally, very few clubs have the resources to adequately remunerate someone who has taken such a step. Such doctors would be well advised to practise their art in a wider environment for both intellectual and financial reasons.

This is not to say that the club doctor should ignore the need for further education in the field of sports medicine. All GPs should respond to their educational needs by attending courses and lectures in the appropriate area. There is plenty of excellent provision available. In my experience, clubs are sympathetic to and supportive of this need. Maybe in time there will be enough doctors with specialist qualification to supply the demand, but, at club level, it is always likely to be as an add on to an existing job. GPs are likely to fill the role. I believe that they can do it well and safely. Is the GP who runs the practice diabetic clinic any less valuable for lack of MRCGP?

The article raises other important issues about the tensions on a club doctor arising from his role as employee of the club and the concerns about the tensions on a club doctor arising from his role as employee of the club and the concerns about the requirements of club doctors who have, and those who do not have, specialist qualifications. She is of course correct, although this is hardly a criticism of our paper, because we made no claim to making such direct comparisons of quality of care. The points made about the need to “sound a note of caution” before a specialist qualification is required as an essential prerequisite for club doctors. In this regard, Dr Mackay’s “caution”, as he makes clear, is aimed more at Michael Cullen's commentary on our paper than on the paper itself. In our own paper, we argue that possession of a specialist qualification (or the willingness to study for one) “should be specified as a desirable (although not, in the short term, essential) attribute of candidates for the post of club doctor”.

However, it is fair to say that, in the longer term, we would like to move towards a situation in which such a specialist qualification is regarded as essential. Our thinking in this regard is based on a view that is, we think, fairly generally accepted: when seeking any service, whether from a doctor, lawyer, or motor mechanic, it is better—other things being equal—to have that service provided by someone who is more, rather than less, well qualified.

We should emphasise that we do not disagree with Rob Mackay’s suggestion that a background in general practice is appropriate for the club doctor; what we argue is that it would be advantageous if the GP acting as club doctor also had an appropriate specialist qualification in sports medicine in much the same way that the crowd doctor in football is required to hold the Diploma in Intermediate Medical Care.

Rob Mackay does raise an important issue when he suggests that the club doctor who dealt only with the limited range of injuries and illnesses in a single club would be likely to find this insufficiently challenging intellectually. We agree. However, there are two rather different issues involved here. The first is whether a doctor has a specialist qualification; the second issue is whether this is essential. We agree. However, it is fair to say that, in the longer term, we would like to move towards a situation in which such a specialist qualification is regarded as essential. Our thinking in this regard is based on a view that is, we think, fairly generally accepted: when seeking any service, whether from a doctor, lawyer, or motor mechanic, it is better—other things being equal—to have that service provided by someone who is more, rather than less, well qualified.

Clare Hay’s letter is much more critical of our research, suggesting that our paper is “inherently biased”. Before we respond to this general criticism, we would like to respond to the major point of her letter which points out that we make no comparisons of the methods used by chartered and non-chartered physiotherapists and their outcomes, nor do we compare the performance of club doctors who have, and those who do not have, specialist qualifications. She is of course correct, although this is hardly a criticism of our paper, because we made no claim to making such direct comparisons of quality of care. The points made about the need to “sound a note of caution” before a specialist qualification is required as an essential prerequisite for club doctors. indirectly and is based on the point made earlier, namely that other things being equal (and we are aware they often are not equal) it is better to have care provided by practitioners who are more qualified, rather than by those who are less qualified. We do not imagine that Claire Hay would disagree with this principle; after all, it is precisely the fact that medical practitioners hold a formal qualification in medicine that differentiates them from lay members of the public.

Claire Hay claims more generally that our paper is “biased” and she goes on to suggest that “published quotations from the semi-structured interviews are of an emotive nature” and the “quotations posed by the interviewer are clearly of a leading nature”. We are at a loss to understand these criticisms. Which quotations does she have in mind? She really needs to be more specific; for our part we have read and reread our article and simply cannot identify any quotations that might properly be considered “emotive”. The quotations that we used from our interviewees were used not with a view to sensationalising our report, but because they reflected a pattern of making appointments that we found repeated again and again in the clubs in which we interviewed.

We are similarly surprised by Claire Hay’s claim that our questions were “clearly of a leading nature”. Which questions does she consider leading? Most of our questions were either open ended, such as “Could you tell me how you got the job as club doctor?” or were straightforward questions such as “Were you interviewed for the post?” or “Do you have a specialist qualification in sports medicine?” Does she regard these as “leading questions”? and should also be reminded that our paper was based not just on these interview data but also on the questionnaires that were sent to club doctors, and it is important to note that the data from these confirmed the findings from the interviews.

Finally, Claire Hay asserts that the “bias” that she claims to detect in our paper arises from the fact that our study was funded by an interested party, namely the Professional Footballers Association (PFA). She has no evidence for this claim. In fact, all aspects of the research were carried out wholly by us, with no input and certainly no interference from the PFA. The PFA did not even see the interview schedule (neither, incidentally, has Claire Hay, despite her unsubstantiated claim about “leading questions”). Nor did the PFA see the questionnaire that we sent to doctors. Nor did they have any input into the writing of our report, or exert any pressure, direct or indirect, on us while we were writing it. Although the PFA have a legitimate interest in this matter, the report was wholly and exclusively our work and we are happy to take exclusive responsibility for our findings.

Sailing and swimming

Editor.—With regard to the excellence of the Australians in the last Olympics, a small riposte is required. We need to examine Darwinism to understand fully this concept. As you pointed out, the Aussies did exceptionally well in the water, but have yet to fully evolve and are still swimming. The Brits on the other hand are further along the evolutionary scale and have realised that to get from one island to another you don’t need to swim, you can sail. And as for rugby (Union the proper code), I do believe the English beat them recently. The other code attempted a “world” cup recently, but each side was made up of Australians and was starting to resemble the US’s version of a world series.

CALANDAR OF EVENTS

The International 16th Puijo Symposium on Health Related Physical Activity and Fitness in Health Promotion and Medical Care — Evidence-based Exercise Prescription
June 26–29, 2001 in Kuopio, Finland.
Further details: please contact Puijo Symposium Secretariat: Kuopio Research Institute of Exercise Medicine, Haapaniementie 16, FIN-70100 Kuopio, FINLAND, Fax: +358 17 288 4488; email: puijo.symposium@uku.fi
Web site: www.uku.fi/conf/puijo

National Athletic Trainers’ Association 52nd Annual Meeting and Clinical Symposium
19–23 June, 2001; Los Angeles Convention Center, Los Angeles, USA
Complete information is available on line through the web site: www.nata.org; fax-on-demand service: +888 275 6285; Tel: +214 637 6282 ext 330.

Canadian Academy of Sport Medicine/Académie Canadienne de Médecine du Sport Annual Symposium and Stampede Sport Medicine Conference
July 4–7, 2001; Calgary, Canada
Learning from the elite athlete: practical applications for the clinician is intended to provide practical education for the clinician regarding common and controversial aspects of sport medicine, as well as to allow the management of sport medicine problems.
Further details: Mme Jacqueline Burke au bureau national de l’ACMS à Ottawa: Tel: +613 748 5851; Fax: +613 748 5792; email: jburke@CASM-ACMS.org.
Web site: www.casm-acms.org

Sixth IOC World Congress on Sport Sciences
16–23 September, 2001; Salt Lake City, USA
Further details: Michele E. Brown, IOC World Congress Secretariat, Salt Lake Organizing Committee for the 2002 Olympic Games, 299 South Main Street, Suite 1300, P.O. Box 45002, Salt Lake City, UT 84111, USA. Tel: +801 212 3472; Fax: +801 212 2440; email: ioc.worldcongress@saltlake2002.com
Web site: www.iocworldcongress.org

20th BRUCOSPORT Meeting
19–20 October, 2001; Congress Centre, Brugge, Belgium.
Further details: Secretariaat Sportgeneeskundige Dagen AZ Sint-Jan AV, Ruddershove 10, B-8000 Brugge. Carine De Bruycker, Tel: +32 50 45 22 30; Fax: +32 50 45 22 31.
Web site: http://user.online.be/brucosport

Australian Conference of Science and Medicine in Sport
23–27 October 2001 Burswood International Resort Casino, Perth, Western Australia.
The theme for the 2001 Australian conference is “2001 A Sports Medicine Odyssey: Challenges, Controversies and Change” and will focus on what the future holds for sports medicine, especially following the Sydney Olympic Games.
Further details: Sports Medicine Australia, PO Box 897, Belconnen ACT 2616, Australia. Tel: +61 2 6230 4650; Fax: +61 2 6230 5908; email: smanat@ama.org.au.
Web site: www.sma.org.au

Concussion in Sport
2–3 November 2001; Vienna, Austria.
International symposium organized by the International Ice Hockey Federation (IIHF) in cooperation with the International Olympic Committee Medical Committee, and the Federation Internationale de Football Association Medical Assessment and Research Center (F-MARC).
The conference will present scientific information on the epidemiology, on site management, treatment, grading, and prevention of concussion in sport. Abstract submissions are invited for the Symposium: Deadline 15 June 2001. An abstract submission form can be downloaded in pdf format from the IIHF web site: www.iihf.com.
Further details: Darlene Scheurich, International Ice Hockey Federation (IIHF), Parking 11, 8002 Zurich, Switzerland. Tel: +41 1 289 8614; Fax: +41 1 2898629; email: scheurich@iihf.com.

II European Federation Sports Medicine Congress
14–17 November 2001; Oviedo, Spain.
Further details: Tel: +34 902 103 873; Fax: +34 902 120 880; email: info@q2c3.com.
