

P.G.J. Maquet

Biomechanics of the Knee

With Application to the Pathogenesis and the Surgical Treatment of Osteoarthritis

2nd edition, expanded and revised.
1983. 267 figures. Approx. 332 pages
Cloth DM 198,-; approx. US \$ 76.90
ISBN 3-540-12489-6

Hailed the world over for its clarity and innovative scientific approach, Maquet's classic explanation of the biomechanical forces acting upon the knee and their application to the treatment of osteoarthritis is now in its second edition. For this revised and expanded edition, the author has updated the data on biomechanical stresses and analyzes the results of recently developed surgical procedures based on them.

From the reviews:

"...Dr. Maquet and his publishers are to be congratulated on producing a book of considerable beauty. Its general layout and the clarity of what are often complicated photographs of stress-loading in photo-elastic models, anatomical specimens and radiographs set a standard of technical excellence..."

Rheumatology and Rehabilitation

W. Müller

The Knee

Form, Function, and Ligament Reconstruction

Translated from the German by T.C. Telger

Foreword by J.C. Hughston

Illustrations by R. Muspach

1983. 299 figures in 462 partially coloured separate illustrations.
XVIII. 314 pages
Cloth DM 248,-; approx. US \$ 96.30
ISBN 3-540-11716-4

The important anatomical structures in the knee, their inter-relationships and the range of conservative and operative procedures currently used for treating knee injuries are described in detail in this work. The author places particular emphasis on a firm understanding of functional processes as a prerequisite for successful diagnosis and surgical reconstruction. With its outstanding and highly instructive illustrative material, this book will aid even the non-specialist in the recognition and effective treatment of lesions in the knee.

From the reviews:

"This is an excellent book which is addressed to the problems of ligament injury and reconstruction. Published by Springer-Verlag, to their usual high standard, the format is of beautiful illustrative diagrams, combined with operative photographs and where appropriate, dissected specimens. The text, for the most part, is easy to follow. Part I deals with anatomy, kinematics and the examination of the injured knee. Part II describes injuries of the ligament and capsule, general operative technique, primary repair, secondary repair, rehabilitation and results..."

The book concludes with an excellent review of results. The bibliography is first rate, and the index adequate. The literature review throughout was easily the best I have ever read in this vast and complicated area of orthopaedic surgery... every surgeon who deals with knee ligament problems will want his own copy."

THE NEW EXECUTIVE COMMITTEE

The Helfet Knee Brace - a lightweight but effective support for the damaged knee

The Helfet Helicoid Knee Brace is the lightweight answer to supporting the damaged or unstable knee without hindering its natural action.

It offers a unique combination of freedom of movement while preventing aggravation of the injury giving the wearer the confidence to even participate fully in competitive sport.

By incorporating a novel system of joining the thigh and calf sections of the brace, the knee is allowed the full range of flexion and extension with sufficient play to permit 15 degrees of rotation. Thus the joint can follow its normal helical pattern of movement without fighting against the brace.

The Helfet Knee Brace is suitable for convalescence and after ligament injury, meniscectomy and internal derangements of the knee ensuring a safe rehabilitation and a fast return to peak performance.

When sport is more than just a game.

... you need fast solutions to the problems that can slow you down: no time to eat, appetite loss through tension or exhaustion, poor recovery, muscle soreness or cramps, high protein needs for muscle build up or repair, heavy sweat losses and many others. What you eat and when you eat will affect your performance. That's where we come in.

Sportive Perform has been developed with the aid of coaches and physiologists to help overcome these problems. It's the only range of foods tailored to the demands of training, pre-competition, competition and recovery.

Protein Power

High biological value protein with essential vitamins and minerals. It is important for build up and repair of muscle tissue particularly during the training/build up phase.

Plus Food

A delicious protein rich chocolate drink with carbohydrate vitamins and minerals. It makes sure you get the extra requirements demanded by your training and competition workloads. Used pre-competition it is easily digested and overcomes lack of appetite.

Energy Drink

A tangy citrus flavour drink delivering readily digested carbohydrate and vitamins for immediate and sustained energy, without the side effects sometimes associated with pure glucose.

Mineral Plus 6

Replaces fluid, energy and electrolytes lost in sweating where even small losses can have a serious effect on performance. Taken during training and competition it helps reduce risk of muscle weaknesses or cramps.

Power Back

Speeds recovery after activity by replacing all nutrients depleted in competition. The delicious orange flavour of Power Back helps overcome loss of appetite through mental or physical exhaustion following exertion.

Energy Bar

A handy source of energy throughout all phases of preparation. It is not too sweet, sticky or heavy.
