

Warm up

## To wash or not to wash? That is the question

P McCrory

In my office, I have 12 general textbooks on sport medicine. I am not bragging about this but simply stating an easily verifiable fact. I had recently been reading a newspaper article that noted that the second biggest killer of children in the world is not malaria or tuberculosis, nor AIDS. It is diarrhoea. Over 2000 children die every single day throughout the world from this problem. The simplest solution to reducing this disease burden may be to teach people to wash their hands with soap. Studies suggest that this manoeuvre alone may reduce diarrhoeal illness by up to 43%. Surprisingly hand washing also reduces

the biggest child killer of all, respiratory tract infections. A study by the US military found that respiratory infections dropped by 45% when troops washed their hands five times a day.

Obvious really. Perhaps too obvious because it is surprisingly seldom done. Even in Britain, only one in two mothers wash their hands after changing a baby's nappy and less than one person in three washes their hands after a trip to the toilet. Research trials are currently being done in various African and Asian countries to improve hand washing rates and interestingly these are sponsored by soap manufacturers.

The connection to sports medicine may seem a little arcane, but I began to wonder about the problem of "traveler's diarrhoea" that we see in our athletes touring the world and the need to manage this common problem as a team physician in this situation. As I pondered further this question and the prospect of a little "quality assurance" research trial, I did a desktop survey of these tomes to see whether such basic hygiene advice was mentioned in the management of this condition. To cut to the chase, although every book detailed antibiotic cocktails that I could prescribe and rehydration strategies to minimise the problem, none recommended hand washing or any other hygiene advice. In the section about the frequent respiratory infections in the lead up to competition in trained athletes, it is recommended by some that salivary IgA levels are tested or antibiotics prescribed but the athletes hands remain thoroughly unwashed.

Have I missed something here? Perhaps our mothers were right with some of their advice!

### 2003 AUSTRALIAN CONFERENCE OF SCIENCE AND MEDICINE IN SPORT AND THIRD NATIONAL SPORTS INJURY PREVENTION CONFERENCE

#### "Tackling the Barriers to Participation and Performance"

25–29 October 2003 National Convention Centre, Canberra, Australia

#### Keynote speakers

- Professor Roald Bahr, Oslo, Norway. Chair of the Oslo Sports Trauma Research Centre and Professor of Sports Medicine at the University of Sport and Physical Education. Internationally renowned expert on injury prevention and rehabilitation
- Dr Hakan Alfredson, Umea, Sweden. Orthopaedic surgeon, Professor at the University of Umea and world leader in tendon injury research. Specialist in articular cartilage repair and surgery

#### Programme highlights

- Sir William Refshauge Lecture by Dr Brian Sando, former Australian Olympic Team Chief Doctor
- "How to Give Medical Evidence in Court". A hands on workshop in a real courtroom
- Professor Maria Fiatarone Singh: Exercise in older adults—are the barriers real or imagined?
- Dr John Best, Australian Rugby Union Chief Medical Officer: Injury and rugby issues
- Cardiac barriers to participation: Exercise, prevention, and rehabilitation
- Professor Kevin Norton: Intervention strategies for increasing physical activity patterns
- Dr Craig Purdham and Dr Jill Cook: New Views on Tendons
- Hypothetical "The fat Australian: Who's to Blame?" chaired by Dr Glenn Cardwell
- Debate: What is the most effective exercise regime for good health? Chaired by Professor Wendy Brown.

Plus the opportunity to attend the Wales versus Italy World Cup Rugby Union match.

#### Call for Papers

The conference Committee is calling for abstracts for podium and poster presentations. Researchers are also invited to join with colleagues to submit a group of three or more abstracts which focus on any aspect of the Conference theme, to be presented in a single "symposium" session.

All accepted abstracts will be published in a supplement to the *Journal of Science and Medicine in Sport*.

All submitted papers are eligible for more than A\$28,000 in prize money as part of the Australian Sports Medicine Federation Fellows' Awards.

Please see [www.sma.org.au/2003conference/call\\_for\\_papers](http://www.sma.org.au/2003conference/call_for_papers) for further details

**The deadline for abstract submission is Friday 30 May 2003**
