Swedish Society for Physical Activity and Sports Medicine: a long history of excellence in sport and exercise medicine

Magnus Forssblad, Karim Khan

Kudos to Sweden for its 11 medals at the Summer Olympic Games. From the comfort of the BJSM media centre in Vancouver, Sweden was first prominent via triple (and full set) swimming medalist, freestyle and butterfly swimmer Sarah Sjostrom. A big story in the middle of the Games was Sweden giving the US women’s football team marching orders in a penalty shoot-out. No-one who saw it will forget Lisa Dahlkvist’s ice-cool head (and smile) as she waited to take the match-winning penalty, while the opposing goalie delayed the moment of truth with some essential glove repair work. Whistle! BOOM! Goal!

And speaking of fearless, sangfroid, Sweden showed bike wizardry to medal on the road and in the mountain (Emma Johansson and Jenny Rissveds). BJSM and in the mountain (Emma Johansson and Jenny Rissveds). BJSM showed bike wizardry to medal on the road and in the mountain (Emma Johansson and Jenny Rissveds). The second biggest annual prize for medicine has just been awarded to Japan’s professor Yoshinori Ohsumi for discovering autophagy.

At the younger age spectrum, our colleagues in Copenhagen, including Professor Jens Bangsbo, highlight the benefits of screening young people to prevent ‘FIFA 11 for Health’ (see page 1394). From Finland, an epidemiological study of Women’s International Ice Hockey at the very highest level (see page 1406). Our 2016 Swedish meeting keynote speaker, Professor Jon Drezner, argues for the benefits of cardiac screening (see page 1376). See last issue’s Swedish issue for Mats Borjesson’s take along those lines. These are important debates and Drezner strongly rebuts the push by Van Brabant (in The BMJ) that screening may be futile. Also from USA, at a time when all eyes will be on the election booths, the extraordinary talented Professor Chad Cook explains why we have a long way to go before we can predict injury accurately (see page 1356). This seems to be a hot topic right now and we imagine it will not be resolved until the keynote on that topic in Monaco, 16–18 March 2017 (http://www. ioc-preventionconference.org/)

The Swedish Annual Meeting: Plan Now for 2017!
As the nights get longer in the Northern Hemisphere, you can already anticipate the spring. There is nowhere better than Umeå in 11–13 May 2017 (figure 2). Long, long days to celebrate the best of Swedish sports medicine. Brilliant keynote speakers for Umeå are:

- Professor Roman Seil, from Luxemburg, the President of the European Society for Sports Traumatology, Knee Surgery and Arthroscopy (ESSKA)
- Professor Neil Armstrong, Exeter University, Children’s Health and Exercise Centre
- Professor Ulf Ekelund, Norwegian School of Sport Sciences (NIH)

Competing interests None declared.

SCANDINAVIAN ADVANCES AND CONGRESS IN NORJEFFEL

This issue highlights the strength of Scandinavian research. Danish researchers are prominent with a major study of the risk of sitting and its association with Type 2 diabetes mellitus (fixable!) (see page 1382). We also publish a simple review of Diabetes Guidelines around the world (see page 1379). It is an example of what can readily be performed in various conditions—stronger together (more able to argue to policymakers).
